ST. BERNARD

St. Bernard is a natural canine breed the Swiss Alps. It was developed from crosses of ancient molossos "soldiers" Romans brought to the region by the troops of Rome. Their survival was assured thanks to the monks, who, since 1660, began to create them in a monastery called Hospice du Grand St. Bernard, located in one of the highest points in those mountains and place where travelers went to cross the

It was his job to find buried victims and seek aid from the monks if the victim could not move.

Physically, they were crossed to obtain a robust dog, insulating coat and with an excellent nose, that could work in rigorous situations. According to historians, rescue missions involving four canines, neither using the keg neck as it appears in photographs and films: to find a buried, two dogs lay down beside him to warm him, an attempted resuscitation him
